

Joint Industry Guide – STATEMENT Material Composition Declaration for Electrotechnical Products

Dear Valued Customer,

The Consumer Electronics Association (CEA®) announced the release of the revised “Joint Industry Guide – Material Composition Declaration for Electrotechnical Products –JIG-101 Ed. 4.1” an industry materials declaration guide that facilitates the reporting of material content information in electrotechnical products across the global supply chain.

The Swissbit AG (Swissbit) supports the aim of the Joint Industry Guide (JIG) in improving the protection of human health and the environment through the better and earlier identification of the intrinsic properties of chemical substances, like REACH. Swissbit meets all applicable JIG requirements and is committed to provide our customers with information about substances in its products as required.

As referred to in the Material Composition Declaration, Swissbit is a downstream user, so it is anticipated that substances used in electronic products will be registered by the raw material manufacturers within the supply chain. To further ensure compliance, Swissbit continually reviews information from its suppliers about delivered material and products concerning substances which are contained on the Joint Industry Guide.

Swissbit's products do not contain any substances, based on both materials content declarations from our suppliers and independent laboratory testing of JIG list.

Please do not hesitate to contact us should you have of any questions. We will be happy to share our expertise and data with you.
